

APPLIED DATA SCIENCE CAPSTONE

BATTLE OF NEIGHBOURHOODS

Introduction/Business Plan

The aim of this capstone project will be to find out what kind of business should be set up in a given city. This project will be done by collecting data about the different neighbourhoods in that particular city as well as the kinds of businesses that exist in that particular area.

This data will be used to determine what kind of business should be set up, such that it will be profitable.

Data Description

The data will consist of the different neighbourhoods in a given city, the different kinds of businesses that exist in that city, their ratings, the category that the particular business belongs to as well as the addresses of the different businesses. Latitude and longitude will be included in the address column.

This data will be collected using the Foursquare API.
